

ict tool of the week

coggle BETA

Coggle is a free online mind mapping tool that is simple, effective and best of all, collaborative. Students can create accounts using their MLP12C gMail accounts and just like a Google Doc, they can collaborate and edit one mind map together!

As the website itself says... "Beautiful Notes, Effortlessly
With Coggle it's easy to make your notes as clear as your thoughts.
Whether it's lasers, the civil war, or geology (who are we to judge), you can make complex things simple, and easy to remember."
